Musician Filtered Custom Earmoulds

For a musician, hearing isn't just a means of communication—it's a way of life. Constant exposure to high sound levels can affect a musician's ability to make crucial sonic adjustments during a performance. Musicians Filtered Custom Earmoulds use flat-response attenuators, so that sound heard through the filters has the same quality as the original sound, just quieter.

Custom made for you

Musicians Filtered Custom Earmoulds attenuate sound across all frequencies rather than just low and mid-range frequencies, making music more clear and natural sounding.

Unlike traditional earplugs which introduce a frequency bias, our Musician Filtered Custom Earmoulds are designed using soft silicone to protect your hearing, while delivering clear sound across all frequencies — available with 10, 15, 25 or 30 interchangeable filters, with or without removal handle and cord attachment.

As part of Starkey's extensive Quality Control Process, Musicians custom hearing protection are 100% tested to ensure consistent sound levels between each pair of moulds.

Filter usage guide

- 10** Suitable for use under light noise exposure such as vocalists, acoustic guitar or string players.
- 15** For use under medium noise pressure - ideal for most musicians.
- 25** Suitable for heavy noise conditions e.g. highly amplified instruments, percussion or bass players.
- 30** Suitable for drummers.

MusicSafe Classic

For protection during concerts and other loud music events. Includes two pairs of unique filter sets to choose your own sound protection level.
